1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to process of amidation, classified in class 564, subclass 219.
 - II. Claim 19, drawn to method of fabricating combinatorial libraries, classified in class 435, subclass DIG 21-39.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and II are two distinct processes which are classified separately and are divergent subject matter. A reference anticipating one of the above groups may not render the other obvious under 35 USC 103. Hence the restriction requirement is deemed proper.
3. During a telephone conversation with Joseph Leone on 7/18/05 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-18. Affirmation of this election must be made by applicant in replying to this Office action. Claim 19 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.
4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

DETAILED ACTION

Information Disclosure Statement

5. The information disclosure statement (IDS) submitted on 8/2/04 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Drawings

6. The drawings were received on 2/24/04. These drawings are acceptable.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bon et al(J. Org. Chem., 1994), McKinney(US 5,395,974) and Krogh et al(US 5,587,498).

Instant claims are directed to a process of amide metathesis and transamidation in a solvent using metal containing catalyst at a temperature of under 250°C.

Bon et al is teaching a trans amidation and metathesis reaction using Lewis acid catalyst, see Table 1 and Table 2. The difference between the reference and herein claimed process is that the reference is not teaching other catalysts as claimed herein.

McKinney, Table 1 in column 3-6, and Krogh et al, column 3, lines 45-50, are teaching that the catalyst as claimed herein, are old in the art for the amidation process.

It would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made to modify the process of Bon et al by using the catalyst of McKinney and Krogh et al, because the latter references are expressly teaching that various catalysts as claimed herein are old in the amidation process, with the reasonable expectation of achieving a successful process of amidation, absent evidence to the contrary.
